Sir,

Please refer to your application for development permission for Residential Building on Plot No. 13, Sector-35-D, Owe-Kharghar (12.5% Scheme), Navi Mumbai.

The development permission is hereby granted to construct Residential Building on the plot mentioned above.

The commencement certificate as required under section 45 of the Maharashtra Regional and Town Planning Act, 1956 is also enclosed herewith for the structures referred above.

The Developer / individual Plot Owner should obtain the proposed finished road edge level from the concerned Nodal Executive Engineer. The Developer/ Plot Owner to ensure that the finished ground level of the proposed buildings / shops to be minimum 750 mm above the proposed finished road edge level. In case, the building is having still, the finished still level to be minimum 300 mm. above the road edge level.

The approval for plumbing services i.e. drainage and water supply shall be separately obtained by the applicant from the Executive Engineer, Kharghar, CIDCO prior to the commencement of the construction work.

You will ensure that the building materials will not be stacked on the road during the construction period.

The Developers / Builders shall take all precautionary measures for prevention of Malaria breeding during the construction period of the project. If required, you can approach Health Department, CIDCO, for orientation program and pest control at project site to avoid epidemic.

Since, you have paid 100% IDC of Rs. 10,55,600/- vide LMS/R No.392203 dtd. 10/02/2012, you may approach to the Office of Executive Engineer (Kharghar) to get the sewerage connection to your plot.

Thanking you,

Yours faithfully,  
  
( R. B. Pali )

**SCHEDULE**  
**RAIN WATER HARVESTING**

Rain Water Harvesting in a building site include storage or recharging into ground of rain water falling on the terrace or on any paved or unpaved surface within the building site

1. The following systems may be adopted for harvesting the rain water drawn from terrace and the paved surface.
  - (i) **Open well** of a minimum of 1.00 mt. dia and 6 mt. in depth into which rain water may be channeled and allowed after filtration for removing silt and floating material. The well shall be provided with ventilating covers. The water from the open well may be used for non potable domestic purposes such as washing, flushing and for watering the garden etc.
  - (ii) Rain water harvesting for recharge of ground water may be done through a **bore well** around which a pit of one metre width may be excavated upto a depth of at least 3.00 mt. and refilled with stone aggregate and sand. The filtered rain water may be channeled to the refilled pit for recharging the borewell.
  - (iii) An impervious surface/ underground storage tank of required capacity may be constructed in the setback or other open space and the rain water may be channeled to the storage tank. The storage tank shall always be provided with ventilating covers and shall have draw-off taps suitably placed so that the rain water may be drawn off for domestic, washing gardening and such other purposes. The storage tanks shall be provided with an overflow.
  - (iv) The surplus rain water after storage may be recharged into ground through percolation pits or trenches or combination of pits and trenches. Depending on the geomorphological and topographical condition, the pits may be of the size of 1.29 mt. width X 1.20 mt. length X 2.00 mt. to 2.50. mt. depth. The trenches can be of depth Terrace water shall be channeled to pits or trenches. Such pits or trenches shall be back filled with media comprising the following materials.
    - a) 40 mm stone aggregate as bottom layer upto 50% of the depth;
    - b) 20 mm stone aggregate as lower middle layer upto 50% of the depth;

c) Coarse sand as upper middle layer upto 20% of the depth,

d) A thin layer of fine sand as top layer,

e) Top 10% of the pits/ trenches will be empty and a splash is to be provided in this portion in such a way that roof top water falls on the splash pad.

f) Brick masonry wall is to be constructed on the exposed surface of pits/ trenches and the cement mortar plastered.

The depth of wall below ground shall be such that the wall prevents loose soil entering into pits/ trenches. The projection of the wall above ground shall atleast be 15 cms

g) Perforated concrete slabs shall be provided on the pits/trenches

- (v) If the open space surrounding the building is not paved, the top layer up to a sufficient depth shall be removed and refilled with coarse sand to allow percolation of rain water into ground.
2. The terrace shall be connected to the open well/borewell/storage/tank/recharge pit/trench by means of HDPE/PVC pipes through filter media. A valve system shall be provided to enable the first washings from roof or terrace catchment, as they would contain undesirable dirt. The mouths of all pipes and pipes and opening shall be covered with mosquito (insect) proof wire net. For the efficient discharge of rain water, there shall be at least two rain water pipes of 100 mm dia mtr. for a roof area of 100 sq. mt.
  3. Rain water harvesting structures shall be sited as not to endanger the stability of building or earthwork. The structures shall be designed such that no dampness is caused in any part of the walls or foundation of the building or those of an adjacent building.
  4. The water so collected/recharged shall as far as possible be used for non-drinking and non-cooking purpose.

Provided that when the rain water in exceptional circumstances will be utilized for drinking and/or cooking purpose, it shall be ensured that proper filter arrangement and the separate outlet for by passing the first rain-water has been provided.

Provided further that it will be ensured that for such use, proper disinfectants and the water purification arrangements have been made.
